

Your weekly product update. **60 seconds. Every format.**

Paste your week once — get an audience-tuned update in four formats:
Slack · CEO email · Board slide · Engineering standup.

Mind the Product · World Product Day 2026 · [#EveryoneShipsNow](#)

► Live: pulsereport.vercel.app · Judges: </generate?demo=1> for instant access

Every Monday, PMs write the same update — four times

- What happened. The numbers. What shipped. What's at risk. — then **rewrite it for the CEO**, again for the **board**, again for **engineering standup**.
- Average: **3.2 hours every week**. That's **160 hours per PM per year** — and **800 hours/year** for a team of five.
- Nobody has fixed it. Not Notion. Not Linear. Not Amplitude. They tell you *what* happened.

A universal, weekly, senior-PM tax — that **no tool has automated**.

WHY NOW — AND WHY NOT NOTION / LINEAR / AMPLITUDE

They report the data. PulseReport writes the story.

	Notion	Linear	Amplitude	PulseReport
Shows what happened	✓	✓	✓	✓
Multi-audience rewrite	✗	✗	✗	✓
PM-tuned narrative voice	✗	✗	✗	✓
60-second output	✗	✗	✗	✓

Dashboards end where the writing begins. PulseReport starts there.

HOW IT WORKS

One paste in. Four audiences out.

① Paste your week ~2 min

Metrics (this vs last week) · what shipped · user feedback · risks · your one-line recommendation.

② Generate ~60 sec

Gemini 2.5 Flash returns four formats as structured JSON — each written *for* its reader, not adapted from a template.

```
# 5 input blocks → POST /api/report → { slack, ceo, board, standup }
```

THE OUTPUT

Four formats, four voices

Format	Audience	Shape
 Slack	The team	≤300 chars, emoji, scannable, action-first
 CEO Email	The exec	2 strategic paragraphs, specific numbers, no hedging
 Board Slide	The board	5 crisp bullets, business impact first
 Standup	Engineering	Last week / this week, deploy notes, metrics

The **/compare** view shows all four side-by-side with live word counts and one-click "Share all".

THE WINNING MOMENT

Watch the pulse complete

```
paste week (metrics · shipped · feedback · risks · rec)
  → generate (amber pulse line runs left → right, ~1.8s)
  → Slack message      posted to #product-team
  → CEO email          pasted into Gmail
  → Board bullets      dropped into the deck
  → Eng standup        posted to #engineering
```

That was **90 seconds**. Not 3 hours.

Next.js 15 · Gemini · Novus.ai — and it never hard-fails

Browser (App Router)

/generate **-POST→** /api/report (Node runtime)

| validate (metrics + shipped)

key set → Gemini 2.5 Flash → 4 formats (JSON)

no key / error → buildDemoReport() deterministic fallback

/generate **-sessionStorage→** /compare

every action → Novus.ai / Pendo (report_generated, format_copied ...)

The demo runs with **zero secrets** — no key just means deterministic output, never a broken screen.

Real PMs. Real usage. Real decisions.

- Five events shipped: `report_generated` `format_copied` `format_switched` `report_shared`
`sample_loaded`
- Each generation tags `judge_mode` + `source` — demo traffic stays separable from real usage.
- The questions this answers: **which format do PMs copy first?** · **which section do they edit most?** · **how long before they copy?**

The data tells us what to build next — that's product management, demonstrated, not described.
(Hypotheses to validate live during the hackathon window.)

FOR THE JUDGES

One click. No typing. Full demo.

Open **pulsereport.vercel.app/generate?demo=1**

- A realistic PM week is **pre-loaded automatically** and generated on arrival.
- A **Judge Mode** banner confirms you're seeing the canonical sample.
- Switch tabs, copy any format, hit `/compare` to see all four at once.

Zero friction between "open the link" and "feel the hours saved".

WHY IT WINS · WHAT'S NEXT

Judged by PMs — who write this update themselves

Why it wins

Every judge is a PM who writes this update every week. The demo makes them *free* the 3 hours saved — and the output is shareable, so it spreads inside teams.

What's next

Auto-import metrics (Mixpanel/Amplitude) · changelog from Jira/Linear · Slack auto-post at 9am Monday · week-over-week narrative · team mode.

5M PMs × 160 hrs/year — returned to actual product work.

PulseReport

Everyone Ships Now.
PMs ship their update in 60 seconds.
